📍 Cluj Napoca

EDUCATION

Bachelor of Computer Science
Technical University of Cluj Napoca
2015-2019

High School Degree
National College „Liviu Rebreanu”
Mathematics & Informatics intensive
Bistrița.
2011-2015

PRIMARY TECHNOLOGIES

Node JS	HTML
React	CSS
REST API	MongoDB
JQuery	Mysql

SECONDARY TECHNOLOGIES

Ruby	Angular
C/C++	Java

ABOUT ME

My passion for computer science began at 17, during high school, when I fell in love with algorithms and problem-solving, fueled by my interest in mathematics. This led me to pursue a degree in computer science, where I was most inspired by courses in Object-Oriented Programming, Software Design, and Algorithmics. As a developer, I am particularly interested in back-end roles, with experience in technologies like Node.js, but I am equally comfortable working as a Full Stack or even Front-End developer. I am also open to exploring new roles that challenge me to grow and expand my expertise. Eager to learn and adapt, I thrive in collaborative environments, simplifying complex concepts, and contributing to innovative, impactful projects.

WORK EXPERIENCE

Full Stack Web Developer 05/2024
Smart Box Digital,– Romania, BN, Rodna 08/2024

Web Application for Logistics and Freight Industry

Technologies: HTML, CSS, JavaScript, Node.js, MongoDB

- Developed a web application to streamline booking processes for logistics and freight.
- Front-End: Designed a responsive and intuitive user interface for seamless management of shipping needs.
- Back-End: Built server-side functionality with **Node.js** and managed dynamic data (e.g., shipment details, user profiles) using MongoDB.
- Integrated real-time APIs for data exchange with third-party services, enhancing tracking accuracy and booking efficiency.

Lost Dogs Finder Web Application

Technologies: React

- Created a responsive web application to help users find lost dogs.
- Designed a visually appealing and user-friendly interface for posting and browsing profiles of lost dogs.
- Enhanced search functionality to include filters by location and characteristics, improving usability.
- Strengthened front-end development skills while focusing on accessibility and user-centered design.

Front-end Web Developer 09/2020
FOUND CO – UK, London 04/2021

Company Presentation Website

Technologies: HTML, CSS, JavaScript

- Implemented the company's presentation website, transforming detailed design concepts into a fully functional and interactive platform.
- Focused on ensuring responsiveness across devices, delivering a seamless user experience with optimized layouts and dynamic elements.
- Integrated back-end functionalities to enable features such as form submissions and dynamic content rendering, enhancing overall performance and usability.

LANGUAGE

Romanian - Native Speaker

English - Fluent Speaker

RELEVANT SKILLS

OOP Concepts	Data Structures
SOLID principles	Algorithms
Design Patterns	Image Processing

OTHER SKILLS

Organizational skills for large charitable teams (50-100 people)	7 years of public speaking experience to large audiences (500-800 people)
Team player	Social Volunteer Work with "Speranța fără Frontiere"

Key Highlights:

- Worked closely with designers and back-end developers to resolve challenges in aligning visual design with technical requirements.
- Optimized website performance by minimizing load times through efficient coding practices and resource management.
- The project offered hands-on experience in building a polished, user-centric product, while fostering strong teamwork and effective communication within a cross-functional team.

Full Stack Web Developer

Takeoff Labs – Romania, Cluj Napoca

07/2018

11/2019

Plan Hero Web Application

Technologies: Ruby on Rails, PostgreSQL, HAML, CSS, Bootstrap, JavaScript, React, JQuery, Ajax

- Developed core back-end features using Ruby on Rails, including event scheduling, user management, and APIs for seamless front-end integration. Designed scalable data models in PostgreSQL to handle complex relationships and ensure data accuracy.
- Built dynamic, responsive user interfaces with HAML, CSS, and Bootstrap, enhancing interactivity with JavaScript, React, and JQuery. Integrated real-time updates using AJAX, enabling live event changes like attendee counts without page reloads.
- Collaborated with cross-functional teams to resolve challenges such as real-time data synchronization, improving performance and user experience.

Key Highlights:

- Optimized both front-end and back-end systems for scalability and responsiveness.
- Gained valuable experience in full-stack development while delivering a user-friendly, production-ready application.

PERSONAL PROJECTS

Lane detection in real time using image processing Bachelor Thesis

Tools Used: C++, OpenCV

Objective: Develop a real-time lane detection system using advanced image processing algorithms to enhance road safety.

Key Focus Areas:

- Region of Interest (ROI): Simplified processing by isolating relevant image regions.
- Edge Detection: Applied Gaussian filtering and Canny edge detection for accuracy.
- Real-Time Processing: Optimized algorithms for live video streams.

Key Features:

- Real-time lane detection in video streams.
- Handles varying lighting and visual noise conditions.
- Optimized for automotive assistance systems.

Technology Choices:

- C++: Ensured high performance and resource efficiency.
- OpenCV: Used for advanced image processing and edge detection.

Challenges and Solutions:

- Noise and Low Lighting: Reduced noise with Gaussian filtering and adaptive Canny thresholds.
- Real-Time Efficiency: Optimized C++ implementation and utilized hardware-accelerated OpenCV functions.

Outcomes:

- High detection accuracy under challenging conditions.
- Low-latency processing for live video streams.

Mini Social Media Web App

Tools Used: Ruby, HAML, CSS, Postgresql

Objective: Developed a compact social media platform with essential features to enable user interaction, dynamic DB and content sharing.

Key Features:

- User Authentication: Implemented secure register/login functionality for managing user access.

- User Profiles: Allowed users to upload profile photos and add personal descriptions.
- Content Creation: Enabled posts with text and images, dynamically displayed in a feed with the latest updates from friends.
- Social Interaction: Integrated functionality to like posts and engage with friends' content.

Development Highlights:

- Designed a clean, responsive interface using HAML and CSS for a seamless user experience.
- Optimized feed loading and post sorting to prioritize recent activity.
- Ensured smooth integration of profile customization and media uploads.

Outcomes:

Successfully delivered an intuitive platform that balanced functionality with user engagement, creating a strong foundation for social interactions.
